

# Pool Test Strip Cheat Sheet

## Total Hardness

**VERY LOW- 0 ppm**  
(Ideal Range is 250 - 500 ppm)  
Add 3.665 Kilos of Water TechniX Calcium up for every 10,000L of pool volume.

**LOW - 100 ppm**  
(Ideal Range is 250 - 500 ppm)  
Add 2.199 Kilos of Water TechniX Calcium up for every 10,000L of pool volume.

Your Pool Hardness Levels are within Ideal Range.

Your Pool Hardness Levels are within Ideal Range.

**TOO HIGH - 1000 ppm**  
(Ideal Range is 250 - 500 ppm)  
Add 350ml of waterTechniX Calcium down for every 10,000L of pool volume, Recheck after 7days.

## Free Chlorine

**VERY LOW - 0**  
(Ideal Range is 1-3 ppm)  
Add 36 Grams of Water TechniX Stabilised Chlorine for every 10,000L of pool volume.

**VERY LOW - 0.5**  
(Ideal Range is 1-3 ppm)  
Add 27 Grams of Water TechniX Stabilised Chlorine for every 10,000L of pool volume.

**Borderline - 1**  
You can add 18 Grams of Water TechniX Stabilised Chlorine for every 10,000L of pool volume.

Your Chlorine Levels are Perfect!

Your free chlorine is borderline too high. Did you just shock your pool? Wait 24 hours and test again.

Your free chlorine is borderline TOO HIGH. Consider partially draining your pool and refilling, then test again.

## Total Chlorine

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

If total Chlorine is equal to free Chlorine, you may need to superchlorinate your pool.

## Cyanuric Acid

**You NEED to add Cyanuric Acid**  
(Ideal Range is 30-100 ppm)  
Add 500 grams of Cyanuric Acid Blockout for every 10,000L Pool Volume.

Your Cyanuric acid levels are perfects, keep up the good work. Don't forget to stock up on Blockout.

Your Cyanuric acid levels are perfects, keep up the good work. Don't forget to stock up on Blockout.

Your Cyanuric acid levels a bit high, consider adding one bag of Bio Active Cyanuric Acid Remover.

Your Cyanuric acid levels are very high, consider adding one or two bags of Bio Active Cyanuric Acid Remover.

## Alkalinity

**Your Alkalinity Level is Dangerously Low - 0**  
(Ideal Range is 8- to 120 ppm) Add 1.424 Kilos of Water TechniX Alkalinity Up for every 10,000L Pool Water.

**Your Alkalinity Level is Low - 40**  
(Ideal Range is 80- to 120 ppm) Add 0.712 Kilos of Water TechniX Alkalinity Up for every 10,000L Pool Water.

Your Alkalinity is Perfect

Your Alkalinity is Perfect

**Your Alkalinity Level is a bit High - 180**  
(Ideal Range is 80- to 120 ppm) Add some dry acid to your pool according to bag instructions and retest pool water in 24 hours.

**Your Alkalinity Level is High - 240**  
(Ideal Range is 80- to 120 ppm) Add some dry acid to your pool according to bag instructions and retest pool water in 24 hours.

## pH

**Your pH Level is Dangerously Low - 6.2**  
(Ideal Range is 7.2 to 7.8) Add 0.12 Kilos of Water TechniX Alkalinity for every 10,000L pool water, retest in two days

**Your pH Level is Low - 6.8**  
(Ideal Range is 7.2 to 7.8) Add 0.048 Kilos of Water TechniX Alkalinity for every 10,000L pool water, retest in two days

Your pH is Perfect

Your pH is Perfect

**Your pH Level is High - 8.4**  
(Ideal Range is 7.2 to 7.8) Add 150 Grams of Water TechniX Dry Acid per 10,000L to get pH back down to required levels, retest in two days.

**Your pH Level is High - 8.4**  
(Ideal Range is 7.2 to 7.8) Add 300 Grams of Water TechniX Dry Acid per 10,000L to get pH back down to required levels, retest in two days.
